An Impact of Emotional Happiness in Students’ Learning Environment

Abstract:

Students are the heart of the Educational Environment. The Objective of the education focuses on students. The Motto of the education is to refine the students’ knowledge, skills and attitudes under efficient supervision in the educational environment. As per Bloom’s theory on learning activity, a person’s learning activity not only improves his/her knowledge and mental skills (i.e. Cognitive) but also his/her emotional areas (i.e. Affective). Educational Data Mining is one of the blooming applications in the educational sector. It helps in better understanding of students’ learning process and their overall involvement in the process, focused on improvement of the quality and profitability of the educational system. Personality defined as emotional, Attitudinal, Behavioural Responses of an Individual person. Personality is an intrinsic factor of affectivity. Emotional Happiness is an affective category. This research influence to study the Emotional Happiness of students on their personality.
