Tagging: A Case Study of Kashmiri

Abstract:
tagging may be defined as assigning words their appropriate part of speech in a corpus. It can be done manually by assigning a software tool by human taggers. It can also be accomplished automatically by means of the computer program, with no or little human intervention. The label attached to words by a human agent or a computer program, are called as Tags. the computer program is called a Tagger. This paper will attempt to propose a preliminary architecture for a Rule-Based taggers for Kashmiri.
