Empirical analysis of the relationship between students' attributes and performance

Abstract:
The purpose of this paper is to examine attributes that influence the performance of students in the post graduate computer application course. To evaluate these factors, a study is conducted over 800 students from different backgrounds, different states of India (out of India also). Statistical Techniques are used to uncover the trends and patterns in the students’ results, and the attempts have been made to find the factors affecting the performance of the students. So that the reasons can be pointed out and corrective measures can be taken to improve the students’ results.
